

Kyliptix Solutions, Inc.

Founded in 1999 and headquartered in Irvine, Calif., Kyliptix Solutions, Inc. delivers comprehensive software solutions for small- to medium-sized businesses. The company provides “*simple, simple*” Web-based business software services modeled on the principle of Software as a Service, which utilize leading-edge technologies such as AJAX and LAMP. Its multi-lingual Kyliptix Business Suite (KiBS) is available throughout the United States and around the globe, designed as a single user interface capable of successfully bridging the flow of information throughout an organization and eliminating the need for multiple external applications.

The Problem – And the Beginning of a *Simple, Simple* Solution

Previously, small- to medium-sized businesses were severely limited in their software solution choices because the vast majority of software vendors focused only on client/server-based offerings that satisfied the needs of larger corporate enterprises. Kyliptix’ founders recognized that small- to mid-sized businesses also required the same functionality employed by large-scale enterprises. This prompted Kyliptix’ design of a single platform from which all applications could work. From there, the service was developed to accommodate the budgetary and implementation needs of SMBs. The result: a “*simple, simple*” Web-based SaaS solution called the Kyliptix Business Suite (KiBS).

Nearly a decade later, the Web-based, multi-lingual Kyliptix Business Suite is available around the globe, and is essentially transforming the way companies do business. KiBS simplifies the management, processes, interactivity and the security issues that business owners face on a day-to-day basis. Through SaaS, the company is effectively extending the synergistic working ability of business applications to the market – providing greater consistency, improved efficiency and reduced risk to the user. Small- to medium-sized businesses also benefit from the scalability of the service.

Extending the Vision

As a technology-based and driven organization, Kyliptix remains committed to developing outside-the-box applications that are being embraced with increasing frequency – all part of a vision focused on providing usable solutions for small- to mid-sized businesses. KiBS works for businesses in a variety of industries – manufacturing, sales, human resources, legal, service, security and more – because it addresses the fundamental aspects that a business needs to enhance collaboration between groups, establish a centralized customer database, and provide global accessibility and data protection.

“At Kyliptix, we’re dedicated to effectively supporting the unique needs of the SMB community. Clients value our ‘simple, simple’ solutions for affordability and leading-edge technology services. And our in-house design and development team continuously strives to utilize their expertise to provide applications that up until now have only been accessible for enterprise-level clients. We welcome you to join the ranks of satisfied KiBS users around the globe.”

– William Gast, Kyliptix’ Founder and CEO
